Search4SobiPro

Search Module for SobiPro
v1.0.0
Sep - 2011

Contents

Search4SobiPro

Search4SobiPro is a search module built specifically for SobiPro and seamlessly integrates with SobiPro.

Search4SobiPro allows it self to be configured as a simple search module or as an extended search module. As an extended search module, it will allow visitors to search all searchable fields and as a simple search module Search-4SobiPro module can search across the general search fields.

The search functionality it self, is passed on to the core SobiPro extension, which allows users to make use of the powerful search features of SobiPro that allows range searches and multi-select searches. The search results are displayed in the SobiPro results page it self, which further allows admins to control the display of search results.

Main features of Search4SobiPro include:
- Search across all searchable fields.
- Control the fields to be displayed in search form.
- Display search results in Search4SobiPro.

Installing Search4SobiPro

Search4SobiPro is installed as any other Joomla Module. Unzip the package before installation to extract the user manual and the installation package of the plugin.

Configuring Search4SobiPro

Configuring Search4SobiPro consists of configuring the following parameters of the module:

Module class suffix
CSS class suffix to be used by the module. Can be left empty.

Section
Section in which the search should be performed. Similar to the core Search4SobiPro functionality, it is **not** possible to search across all sections.

Extended Search
Show extended search or not. If set to "Yes", the module will list all the fields which are marked as searchable in the search form. If set to "No", only a simple search form will be shown.

In the simple search form, the search will be performed across the fields configured for "General" search.

Search Fields
Additionally configure the search fields that should be displayed in the search form.

If kept empty, all the fields that are marked as searchable in the particular category will be shown in the search form. In addition to this, users can specify the field alias of the fields that need to be displayed in the text area as a comma-separated list.

If any field is specified in this box, all the searchable fields will be compared against this list to compare if it should be displayed.

field alias of a field.

If anything is specified in the Search Field box, only the fields that are shown will be displayed. If the text specified in the Search Fields box does not match a field alias, then **no fields will be displayed**.

ItemID
ItemID to be assigned to the search results page.

Configuring language files

Search4SobiPro is built with multi-language support for administration view. The module is shipped with the default support for en-GB (English - UK). Users can create their own language files to support their native languages.

Language files for Search4SobiPro module is uploaded to 'language' folder of the main site under the sub-folder for the relevant language (e.g. 'language/en-GB').

kBanners4VM

kBanners4VM is the ultimate banner management solution for Virtuemart that allows users to set up HTML and image banners for your Virtuemart e-shop.

kBanners4VM allows you to set up banner groups and assign them to Virtuemart categories allowing you to target your advertiestments to the correct audience.
